

EXECUTIVE EDUCATION PROGRAMME

# Advanced Workshop on Data Analytics, Business Intelligence and Microsoft Power BI

## PROGRAMME FORMAT

### 5-Day Executive Programme

Course Fee: N3.6 Million

## INTRODUCTION

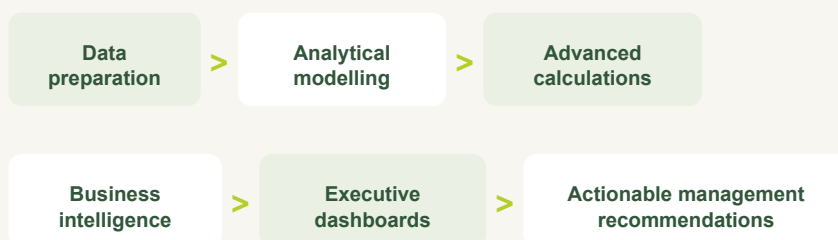

# From data preparation to management intelligence

As organisations generate increasingly complex volumes of financial, operational, customer and performance data, professionals require more advanced analytical capabilities to transform data into reliable management intelligence.

The 5-Day Advanced Workshop on Data Analytics, Business Intelligence and Microsoft Power BI is designed for professionals who already have basic or intermediate experience with data analysis, Excel or Power BI and want to develop advanced capabilities in data modelling, DAX, Business Intelligence, performance analytics, dashboard development and management decision support.

The programme moves beyond basic reporting to focus on how organisations can build more sophisticated, interactive and decision-oriented analytical solutions.

## THE ANALYTICAL JOURNEY

## COURSE OBJECTIVES

# What you will be able to do

By the end of the programme, participants will be able to:

01

## Build the foundation

- Apply advanced data analytics and Business Intelligence concepts.
- Work with complex and multiple data sources.
- Perform advanced data transformation using Power Query.
- Design effective analytical data models.
- Apply advanced relationships and data modelling techniques.

02

## Create analytical depth

- Develop advanced DAX measures and calculations.
- Perform time-series, variance and trend analysis.
- Develop sophisticated KPIs and performance indicators.
- Build interactive executive dashboards.
- Apply drill-through, bookmarks, tooltips and advanced navigation.

03

## Guide the decision

- Analyse financial, operational and portfolio performance.
- Identify trends, exceptions, risks and performance gaps.
- Use Power BI Service for publishing and collaboration.
- Understand basic Power BI security and governance.
- Translate analytical findings into management recommendations.

## TRAINING METHODOLOGY

## Designed for applied mastery

The Advanced programme adopts an experiential, problem-solving and project-based approach.

- Advanced facilitator-led instruction

- Live Power BI demonstrations

- Complex real-world datasets

- BOI/financial-sector-oriented case studies

- Advanced Power Query exercises

- Data modelling workshops

- DAX development exercises

- Dashboard design challenges

- Performance analytics scenarios

- Group problem-solving

- Executive reporting simulations

- Capstone Business Intelligence project

- Dashboard presentation and peer review

The emphasis is on workplace application rather than theoretical knowledge.

## ORGANISATIONAL IMPACT

# Impact across the organisation

The programme can support organisations to:

## OPERATIONAL CLARITY

- Develop stronger internal Business Intelligence capabilities.
- Improve the speed and quality of management reporting.
- Automate and streamline recurring analytical processes.
- Strengthen portfolio and performance monitoring.
- Improve financial and operational analysis.
- Identify trends, exceptions and emerging risks earlier.

## STRATEGIC CAPABILITY

- Improve management visibility across departments.
- Establish more consistent performance dashboards.
- Strengthen evidence-based strategic planning.
- Reduce dependence on manually prepared reports.
- Build internal capacity for advanced Power BI adoption.
- Strengthen organisational data culture and digital transformation.

## PERSONAL IMPACT

## Capability that travels with you

Participants will gain advanced professional capabilities in:

Data analytics and Business Intelligence

Advanced Power BI

Power Query

Data modelling

DAX

Performance analytics

Dashboard development

Executive reporting

Data storytelling

Analytical problem-solving

Management decision support

The programme also positions participants to become internal data champions or Business Intelligence resources within their organisations.

## Who should attend?

- Business Intelligence professionals
- Data analysts
- Business analysts
- Finance professionals
- Credit and portfolio analysts
- Risk professionals
- Strategy and performance officers
- Monitoring and evaluation professionals
- Management information officers
- ICT and digital transformation teams
- Research and analytics professionals
- Audit and compliance personnel
- Project and programme managers
- Managers responsible for performance reporting
- Professionals already using Excel or Power BI for reporting

**Prerequisite:** Participants should have basic/intermediate Excel, data analysis or Power BI experience. Familiarity with Power BI Desktop is recommended.

## COURSE OUTLINE

# The advanced learning roadmap

## 1 Advanced Data Analytics & Business Intelligence

- Advanced analytics concepts
- Business Intelligence frameworks
- Analytical thinking
- Data-driven decision-making
- Performance and management intelligence
- Financial-sector applications of analytics

## 2 Advanced Power Query & Data Preparation

- Data profiling
- Complex data cleaning
- Advanced transformations
- Merging and appending datasets
- Pivoting and unpivoting
- Conditional and custom columns
- Multiple data sources
- Reusable transformation processes

## COURSE OUTLINE

# The advanced learning roadmap

## 3 Advanced Data Modelling

- Star-schema design
- Fact and dimension tables
- Data granularity
- Advanced relationships
- Filter propagation
- Date tables
- Model optimisation
- Scalable analytical models

## 4 Advanced DAX

- Evaluation context
- Row and filter context
- CALCULATE
- Iterator functions
- Advanced measures
- Ratios and contribution analysis
- Ranking and segmentation
- Variance analysis
- Time intelligence
- Year-to-date and period-based calculations

## COURSE OUTLINE

# The advanced learning roadmap

## 5 Advanced Dashboard & Data Visualisation

- Executive dashboard design
- Advanced visualisations
- Dynamic KPIs
- Drill-down and drill-through
- Tooltips
- Bookmarks
- Buttons and navigation
- Interactive reporting
- Advanced data storytelling

## 6 Business & Performance Analytics

- Financial analysis
- Portfolio analytics
- Target versus actual
- Variance analysis
- Trend analysis
- Sector and geographic analysis
- Performance benchmarking
- Exception reporting
- Risk and early-warning indicators

## COURSE OUTLINE

# The advanced learning roadmap

## 7 Power BI Service & Governance

- Publishing reports
- Power BI workspaces
- Report sharing
- Data refresh
- Collaboration
- User access
- Introduction to Row-Level Security
- BI governance
- Data ownership and standardisation

## 8 Executive Business Intelligence & Capstone

- Management intelligence
- Insight generation
- Executive reporting
- Translating data into recommendations
- Integrated dashboard development
- Capstone Business Intelligence Project
- Dashboard presentation and management simulation

## PROGRAMME AT A GLANCE

# Advanced Workshop on Data Analytics, Business Intelligence and Microsoft Power BI

### COURSE DURATION

**5 days**

### COURSE FEE

**N3.6 Million**

Course Duration: 5 days | Course Fee: N3.6 Million
