

FOUNDATION PROGRAMME

Data Analytics and Microsoft Power BI Foundation

PROGRAMME FORMAT

5-Day Workshop

Course Fee: N2.85 million

INTRODUCTION

From raw data to meaningful insights

In today's data-driven business environment, organisations increasingly rely on data to monitor performance, improve efficiency and make informed decisions. However, the value of data depends on the ability of staff to collect, organise, analyse and communicate it effectively.

The 5-Day Workshop on Data Analytics and Microsoft Power BI Foundation is designed to provide participants with practical foundational skills in data analytics, data preparation, visualisation and Business Intelligence using Microsoft Power BI.

The programme introduces participants to the complete journey from raw data to meaningful insights, enabling them to clean and structure datasets, create interactive reports and dashboards, analyse trends and present information in a format that supports better decision-making.

The course combines practical instruction, demonstrations, hands-on exercises and business-oriented case studies, making it suitable for professionals who work regularly with Excel, spreadsheets, reports and organisational data.

THE FOUNDATION JOURNEY

COURSE OBJECTIVES

Build practical data confidence

By the end of the programme, participants will be able to:

01

Understand the essentials

- Understand the fundamentals of data analytics and Business Intelligence.
- Identify and prepare data for analysis.
- Clean and structure datasets for reporting.
- Understand the Microsoft Power BI environment.

02

Build the report

- Import data from Excel, CSV and other sources.
- Use Power Query for basic data cleaning and transformation.
- Understand basic data modelling and relationships.
- Create charts, tables, KPIs and interactive reports.

03

Generate the insight

- Use filters and slicers to analyse information.
- Understand the fundamentals of DAX and business calculations.
- Develop basic management dashboards.
- Interpret data and generate actionable insights.
- Apply data analytics to workplace reporting and decision-making.

TRAINING METHODOLOGY

Learn by doing, step by step

The course uses a practical, hands-on and application-focused learning approach.

● Facilitator-led interactive sessions

● Live Power BI demonstrations

● Step-by-step practical exercises

● Excel and Power BI datasets

● Business case studies

● Individual and group exercises

● Dashboard development activities

● Data interpretation exercises

● Question-and-answer sessions

● Final practical project

Participants will progressively build their skills from data preparation -> analysis -> visualisation -> dashboard development -> insight generation.

ORGANISATIONAL IMPACT

A stronger foundation for better reporting

Organisations that invest in foundational data analytics and Power BI skills can benefit from:

REPORTING IMPROVEMENT

- Improved quality and efficiency of management reporting.
- Reduced dependence on manual and static reports.
- Faster access to business information.
- Improved performance monitoring.
- Better identification of trends and performance gaps.

CAPABILITY BUILDING

- Stronger evidence-based decision-making.
- Improved data literacy among employees.
- Greater use of dashboards and visual reporting.
- Foundation for wider Business Intelligence adoption.
- Improved organisational data culture.

PERSONAL IMPACT

Practical capability for the workplace

Participants will develop practical skills that can enhance their professional effectiveness, including:

● Greater confidence working with organisational data.

● Improved Excel and Power BI reporting capabilities.

● Ability to create professional dashboards.

● Improved analytical and problem-solving skills.

● Ability to communicate insights visually.

● Stronger understanding of Business Intelligence.

● Increased workplace productivity.

● A practical foundation for progressing into advanced analytics and Power BI.

Who should attend?

- Managers and supervisors
- Finance and accounts professionals
- Operations personnel
- Business analysts
- Monitoring and evaluation professionals
- Strategy and performance officers
- Project and programme officers
- HR and administrative professionals
- Audit and compliance personnel
- ICT and digital transformation teams
- Researchers
- Reporting officers
- Entrepreneurs and business owners
- Professionals who regularly work with Excel, spreadsheets or organisational data

Prerequisite: Basic computer literacy and familiarity with Excel or spreadsheets. No prior Power BI experience is required.

COURSE OUTLINE

The foundation learning roadmap

1 Introduction to Data Analytics

- Data, analytics and Business Intelligence
- Types of data and organisational data sources
- Descriptive, diagnostic, predictive and prescriptive analytics
- Data analytics lifecycle
- From data to insight and decision-making

2 Data Cleaning and Preparation

- Understanding datasets and data fields
- Data quality and integrity
- Missing, duplicate and inconsistent data
- Data formatting and standardisation
- Introduction to Power Query

COURSE OUTLINE

The foundation learning roadmap

3 Introduction to Microsoft Power BI

- Power BI environment
- Power BI Desktop
- Connecting to data sources
- Importing and managing data
- Power BI workflow

4 Data Transformation and Modelling

- Power Query transformations
- Merging and appending data
- Data types
- Relationships between tables
- Basic data modelling
- Calculated columns and measures

COURSE OUTLINE

The foundation learning roadmap

5 Data Visualisation and Dashboard Development

- Principles of effective visualisation
- Charts, tables and KPIs
- Filters and slicers
- Interactive reports
- Dashboard design
- Data storytelling

6 Introduction to DAX

- Understanding DAX
- Measures and calculated columns
- Basic calculations
- Percentages and ratios
- Growth and performance indicators

COURSE OUTLINE

The foundation learning roadmap

7 Building Management Reports

- Multi-page reports
- Interactive dashboards
- Performance monitoring
- Trends and variances
- Management KPIs

8 Power BI for Decision-Making

- Interpreting dashboards
- Identifying trends and exceptions
- Generating actionable insights
- Presenting findings to management
- Practical Capstone Dashboard

PROGRAMME AT A GLANCE

Data Analytics and Microsoft Power BI Foundation

COURSE DURATION

5 days

COURSE FEE

N2.85 million

Course Duration: 5 days | Course Fee: N2.85 million
